

Cool Tools, Parts & Services To Restore Or Modify Your Mopar, Camaro, or Mustang!

Chassis Stiffening FAST Is No Accident!

Wanna Be FAST? Get It Stiff!

Level 1

Get your Stiff started!

Frame Connectors and torque boxes add stiffening where the factory engineers knew you need it. Less twist and Unibody flex.

Level 1 kit includes:

- CNC Frame Connectors
- Front & Rear Torque Boxes

Save Over Components Purchased Separately!

Stiffening Components Available Separately

CNC Frame Connectors.......\$331.27 Front & Rear Torque Boxes...\$391.37 Core Support Brace\$271.16 Inner Fender Braces\$289.33 Spring Relocation Kit......\$406.75 Mini-Tub Kit\$419.33

Level 2

Performance you can feel on the road.

Modifications to stock suspension start to move forces to new areas of your car. The **Level 2** kit stiffens your whole car. Less body twist equals more power to the ground. It's an age old equation that works on your Muscle Car!

Level 2 Kit includes:

- CNC Frame Connectors
- Front & Rear Torque Boxes
- Core Support Brace
- Inner Fender Braces

Save Over Components Purchased Separately!

Level 3

Kick Asphalt! Max stiff & max tire. Max power to accelerate & stop.

Max your chassis and max your tire combination. For straight line performance, autocross or canyon carving, The **Level 3** kit goes to the Max. Get all the go and whoa to move the car – not twist it. When you want max power and max traction, get max stiff! Add **Level 3** and go kick some Asphalt.

Level 3 Kit includes:

- CNC Frame Connectors
- Front & Rear Torque Boxes
- Core Support Brace
- Inner Fender Braces
- Rear Spring Relocation Kit
- Mini-Tub Kit

Save Over Components Purchased Separately!

USCT1M1030 70-74 Challenger Level 3 Stiffening Kit

Performance you can feel! Where the stock rear tire clearance is just right Level 2 Hot Rod Chassis Stiffening Kit

A weld-in unibody stiffening package for your hot rod, Resto Mod or sleeper retaining the stock wheel well and width. This is a complete stiffening package that adds an incredible amount of rigidity to your Unibody, provides maximum stiff and the most rigidity possible short of adding a full roll cage to your car.

Level 2 Chassis Stiffening Kit Includes:

- CNC Machine-Cut Frame Connectors
- · Complete Set of Front & Rear Torque Boxes

· Lower Core Support Frame Brace

• Set of Inner Fender Braces

· Set of filler	render braces

HOT ROD FRAME CONNECTORS

CNC Machine cut from 12ga steel (factory rails are made from 16 gauge material) and CNC bent for a precision fit, these frame rail connectors are designed to be welded onto your existing unibody floor pan. No cutting of the floorpan is required and once welded in, they create a fully boxed frame rail connector that is stronger than the original factory frame rails!

INNER FENDER BRACES

The Inner Fender Brace Kit adds incredible triangulated strength to the front end of your Mopar sub-frame front end. The kit includes CNC cut plate steel to box in the top of the OEM shocktower and tie it to the OEM fender panel. Designed to resist frame rail twisting and spread suspension loads across the OEM unibody. An absolute must when adding coil over suspension that moves the suspension loads away from the torsion bar crossmember and places them all onto the front sub-frame.

HOT ROD TORQUE BOXES

These torque boxes add strength to your Mopar unibody in several critical areas. The factory added torque boxes on high-HP, high-torque cars and convertibles. Hemi cars, sixpak cars etc. Our interpretation of the boxes improves on the OEM design. We use stronger than OEM 1/8" thick steel and have them CNC Machine cut and CNC bent. Set of four.

Mustang Chassis Stiffening

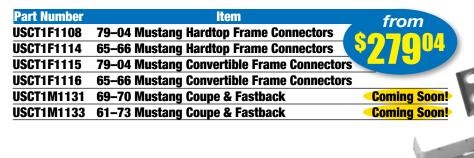

MUSTANG WELD-IN HOT ROD FRAME CONNECTORS

If you have ever wanted to take your Mustang to the next level of chassis updates, you know you need frame rail connectors. The US Car Tool frame rail connectors are custom CNC cut to be a precision fit to the floorpan of your Mustang.

These frame rail connectors are precision CNC cut and CNC bent to form a unique frame member that follows the contour of your existing floor. When they are welded to the floorpan of your Mustang Unibody, you create a complete boxed in frame rail section that is stronger than the original frame rails on your car. Our frame connectors are made from 12 gauge steel (about 1/8" thick) and will create the strongest chassis you can have for your Mustang (without

going to a full tube style chassis).

These frame rail connectors install from underneath your car—no need to cut a slice out of your floor! For years, racers have been cutting a 2" wide slice out of the floor and installing a section of 2 x 4 box tubing that is then welded to the floor as a frame rail connector. When done this way, the connectors are very strong, since the entire floor is connected to the frame. The new US Car Tool frame rail connectors give you the same "welded to the floor" boxed strength, but they do not intrude into the passenger compartment. This means you will have no problems installing carpet or your seats!

USCTAM2003 63-75 A-Body Spring Relocation Kit

SPRING RELOCATION KIT

US Car Tool has now created a kit to help Mopar car owners get even better performance by providing up to 8" more room for rear tires. Anyone who has ever looked underneath the rear end of a Mopar notices the leaf springs are in the way of really wide tires/wheels. Racers and chassis fabrication shops have been moving these in for years, and believe me, it is not as easy as it sounds. Why do you think all the race cars ads ay "Hooks hard and goes straight", unless going straight was not the norm? The US Car Tool leaf spring relocating kit is self aligning off the factory leaf spring mounting holes and includes instruction on how to cut the factory frame rails, locate and weld in the new front and rear mounts and measure to be sure you are straight and square. This kit will help an advanced hot

rodder gain up to 8" of tire tread space in the back of their Mopar!

How To Mini-Tub Your Mopar Using Our Kit!

Disassemble the car, removing the back seat, decklid, fuel filler tube, etc.

Using a spot weld cutting bit, drill out the spot welds holding the wheelhouse in the car.

Drill out the spot welds holding the package tray bracket to the inner wheelhouse.

Drill out the spot welds holding the trunk hinge bracket to the inner wheelhouse.

Tape the cutting line templates (included in the kit) in place and use spray paint to mark your cutting lines.

Following your painted cutting lines, use a Sawzall or other cutting tool to cut out your inner wheelhouse.

Use a Sawzall or other cutting tool to cut out your inner wheelhouse.

Once the inner wheelhouse is removed, weld the wheel tub filler in place.

Here's what your widdened wheel tubs should look like after you're finished welding.

in place!

Still Have Questions? Give John a call at 919–855–8200.

Be sure to weld the package tray brackets to your new widened wheel tubs and use the trunk hinge bracket in the kit to weld your trunk hinge brackets into place.

Use some seam sealer to fill any gaps just like the factory did. Now you're ready for some nice, wide meats!

Spring Relocation How To!

Disassemble the car, removing the rear axle, springs, mounts, and shocks. Also remove the fuel tank and filler tube.

Measure, mark, check and confirm where you will cut the frame rails for your new front spring buckets.

Carefully cut the frame rail, locate and tack weld. Mockup leaf springs in the front spring bucket. Confirm springs align with the rear frame rails.

Carefully locate the new rear spring hanger Mockup, measure and then fully weld the mount.

new front spring buckets.

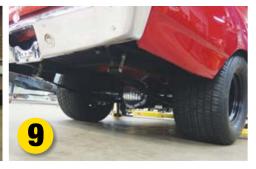

Fully weld the new rear spring hanger mounts (shown tacked in place).

Prep your rear axle housing for the new relocated spring perches, mockup the rear-perches in position, then weld them to end and tires/wheels in the car. **DO NOT MEASURE!**

Double check after tack welding the the axle housing.

Reassemble the car, installing the rear axle, springs and shocks. Enjoy the fruits of your labor—huge tires IN the fender wells, increased traction, better ETs, and bad-ass stance.

Spring Relocation and Mini-Tub Kits for Your Mopar

Yes, you can fit a Viper tire (355/30ZR19) on the rear of your Mopar utilizing our Mini-Tub and Spring-Relocation Kits! Maximum traction, quicker ETs, and bad-ass stance are yours to be had!

CUSTOM ROLL CAGES

The Body-In White

What Is It?

The Body-in-white program is a program to have your classic auto body shell restored back to an all-metal state. All old paint is stripped to bare metal, dents, rust and incorrect collision work repaired to a metal finish (No BONDO). Inside rust inhibitive coatings are replaced and exterior panels are in primer, ready for final prep and paint.

Why do I want it?

All work done in metal, No hidden rust, no shoddy hidden work, NO BONDO! No surprises in the costs of having your classic done right, you know what the costs are at the start of the project. Complete picture and written documentation of every step in the process.

What is included?

The Body-in-White Deluxe includes all metal body panels on your classic. **The Body-in-White Standard** includes only parts welded to the Body Shell, except roofs, frame rails. Body Shell Stripped to bare metal (Media Blast and / or Chemical Dip), Disassemble panels at factory spot weld locations, Repair or Replace damaged panels (parts cost included!)

Standard Body-in-White Includes:

Core Support **Dutchman Panel** A Pillars Inner Fenders **B** Pillars Package Tray Firewall **Quarter Panels** Rockers Cowl Trunk Floor Pan Inner and Outer-Trunk Floor Extensions Wheelhouses Floor Pans-Front. Rear and Trunk Gutters Tail Panel Kick-up

In **BOTH Standard and Deluxe Body-In-White programs** we fabricate unavailable panels to factory OEM appearance (You will not be able to tell). Rust inhibitive coating is applied inside panels and structures and standard factory undercoating applied inside quarter panels. The entire body shell is primed, ready for final prep and paint.

DELUXE AUTO BODY ROTISSERIE

This is our Deluxe Rotisserie with roller bearings, 8 Caster wheels and hydraulic jacks. Rated to support up to 2,000 lbs, fully adjustable in height, width, and length. You can load just about any automobile body, or pickup cab onto the rotisserie and rotate it to work on the underside without having to crawl on your back!

The rotator heads are precision built with tapered roller bearings and a machined axle assembly for smooth operation.

This makes the US Car Tool Auto Body Rotisserie spin easily! The tapered roller bearings in each rotator head assembly eliminate any play or movement in the rotating assembly and provide precise rotation about the axis.

Order the Deluxe Rotisserie or our convenient U–Weld–It Kit for an economy version where you buy the steel tubing locally and then build it in your own shop.

Part Number	Item	Price
USCTR1201D	Deluxe Auto Body Rotisserie*	\$3319.77
USCTRU1201	U-Weld-It Rotisserie Kit	\$648.56
,	Rotisserie Rental	\$150.00/mo.

Every Deluxe Auto Body Rotisserie has a lifetime warranty on materials and workmanship, the jacks and caster wheels carry manufacturer's warranties of 1 year each.

Every USCT Motorsports Rotiserrie now comes with solid polyurethane wheels for years of reliable use.

Body Wheels & Engine Dolly

from

roll the body shell around in your shop or take it onto your trailer to go to the paint shop etc. Each set includes two front 8" ball bearing swivel caster body wheels and two 8" fixed rear caster body wheels. The rear brackets bolt onto the leaf spring mounting locations. The front brackets are specially designed, laser cut, formed and welded to allow bolting onto either front bumper mounting location or the K-frame bolting locations. Brackets are powdercoated in wrinkle black for years of great looks, even in the roughest garage environment. We use them in our shop all the time!

MOPAR ENGINE DOLLY WITH SWIVEL CASTERS

If you have an empty block, longblock or a complete motor, the USCT Motorsports Engine Dolly is the best tool to store and roll it around your shop or garage. Based on the original design by AR Engineering (design used with permission), the USCT Motorsports Engine Dolly will withstand years of use, and is not affected by gasoline, oil, water or fluids.

Bolts easily onto the engine mounting ears in the front and the bellhousing location in the rear—all hardware is included to mount the Engine Dolly to your Mopar Big Block.

For any Engine Dolly, it is all about the Casters. We source these casters from the same company that makes them for our K-frame stands and Rotisseries. These 4" caster wheels are rated to support over 500lbs each. We put four of them on the USCT Engine Dolly because we have a simple philosophy that is the foundation of our products; "Nothing overbuilt ever broke".

Uni-Lift & K-Frame Stand

UNI-LIFT UNIBODY FRONT END LIFTING TOOL

The Uni–Lift allows the front end of your Mopar A/B/E–Body to be lifted over 5' in the air for easy installation or removal of the front suspension. The Uni-Lift bolts to the front bumper mounts on the front frame rails and is CNC machine cut with the bolt patterns for Mopar A, B & E-Bodies. Other patterns can be accommodated with a simple modification. The Uni-Lift comes powdercoated and is fully adjustable to fit any car body. Requires an engine hoist (not included) to safely lift the front of your car body with the rear tires on the ground. Combine this tool with our US Car Tool K-Frame stand for a great restoration engine installation experience!

K-FRAME STAND

Fits all A/B/E–Body Mopars that use a K-frame front suspension. Adjustable for all engines and transmissions, from Slant 6 through Hemi's! Allows removal or installation of the entire front drivetrain assembly from underneath the car just like the OEM factory did. No more paint scratches or accidents from swinging motors held on the end of a chain. Combine this with our Uni-Lift to remove or install the front suspension/engine assembly without the need for a lift. Includes 4"caster wheels for easy rolling.

USCT7M1001	K-Frame Stand	\$???.??

K-FRAME ADAPTERS

These are adapters for the USCT Motorsports K-frame stand. They permit using the K-frame stand with a non factory OEM tublar style K-frame such as the RMS Alterktion or the Magnumforce K-frames. You will receive two (2) adapters and they mount on the top of the K-frame stand uprights, this permits any square or round tube member of the aftermarket K-frame to be supported by the USCT Motorsports K-frame stand.

Part Number	Item	Price
USCT7M5012	K-Frame Adapters	\$53.10

USCT7M5016	Gen3 Hemi Adapters	\$64.29

"Using USCT Motorsport's Uni-Lift and K-Frame Stand, I was able to install the engine, transmission, K-member and front suspension in my '71 in a few hours one afternoon. And that was working by myself. Imagine if you get a couple buddies to help out! Really cool and innovative tools that ease working on your Mopar!"

Bruce from North Carolina.
